

ProBiz is pleased to introduce SALTO to you, one of the world class access control products for your business. You can enjoy wireless access solutions from the world leader. If you are looking for protection from uncontrolled access, SALTO can deliver the perfect solution, tailored to your exact requirements to provide you with all the security, convenience and control you need.

State-of-the-art electronic locking systems offer flexible and functional access control with a wide choice of software options. Our access control systems are designed to work in a wire free environment so there is no need to hard wire the building, allowing you to keep your original doors and locks in place. This makes installation fast, self-contained and straightforward. An access control system that uses distributed intelligence in both the lock and the key to communicate wirelessly with PC based SALTO programming software that makes lock re-programming or re-keying a thing of the past.

Both key cards and locks can be programmed to allow or restrict access to different parts of the building. And the information stored in the key card can be transferred to a computer to provide precise audit trail information about where and when each lock has been used including the date, time and whether access was allowed or denied.

Combined with the additional functionality provided by the SALTO Virtual Network (SVN), users can achieve 90% of the benefits of a fully on-line system for the cost of a standalone system. And now with the brand new XS4 on-line battery operated wireless lock system you can experience real time access control solutions without the need for wiring.
